Recently, a quagga mussel was found in a tub of Evergreen brand emerald shiners that was purchased in Saskatchewan. Introductions of aquatic invasive species can be disastrous to our waterbodies.

Anglers who have purchased Evergreen brand frozen minnows should make sure that they check their bait for any aquatic invasive species – prior to use.

Vendors who stock Evergreen brand frozen minnows should ensure customers are aware of the risk of contamination and remind them to inspect their bait for aquatic invasive species.

If you discover invasive mussels or other aquatic invasive species in your angling bait – or in any Saskatchewan waterbody – please call the Turn in Poachers and Polluters (TIPP) Line at 1-800-667-7561.
