

PUBLIC NOTICE

Effective until September 30, 2022

The Water Security Agency will be completing upgrades to the Spruce River Dam at the southwest outlet of Anglin Lake in August 2022. The scope of work will replace and upgrade the existing stoplog monorail system including a fenced stoplog storage compound, electrical modifications and improvements to handrails and other public safety features on site.

Access, pedestrian or otherwise, across the structure will be limited during this timeframe as this will be an active construction site. In preparation for construction and while construction is in progress, lake levels on Anglin Lake will also temporarily be lowered by 0.38 m (1.25 ft). Lowering of the lake level has been initiated and will continue until the end of September.
